SpecWithCode Classroom

Free AI study help that never runs out

For K-12 schools. Pools the AI plans a school already has and switches when one runs out, so no student gets cut off mid-class.

specwithcode-classroom.vercel.app

Anton Abyzov

THE PROBLEM

Free AI runs out by mid-morning

10:40

A typical moment the free tier hits its cap. Second period, and the help is gone.

Meanwhile the school already holds AI capacity it never uses: grant credits, a district free tier, a spare plan, a computer signed in to Codex. It sits behind four logins.

Kids whose families pay

Keep going. Paid tier, no cap, homework done.

Everyone else

"You have reached your limit." Stuck until tomorrow.

THE IDEA

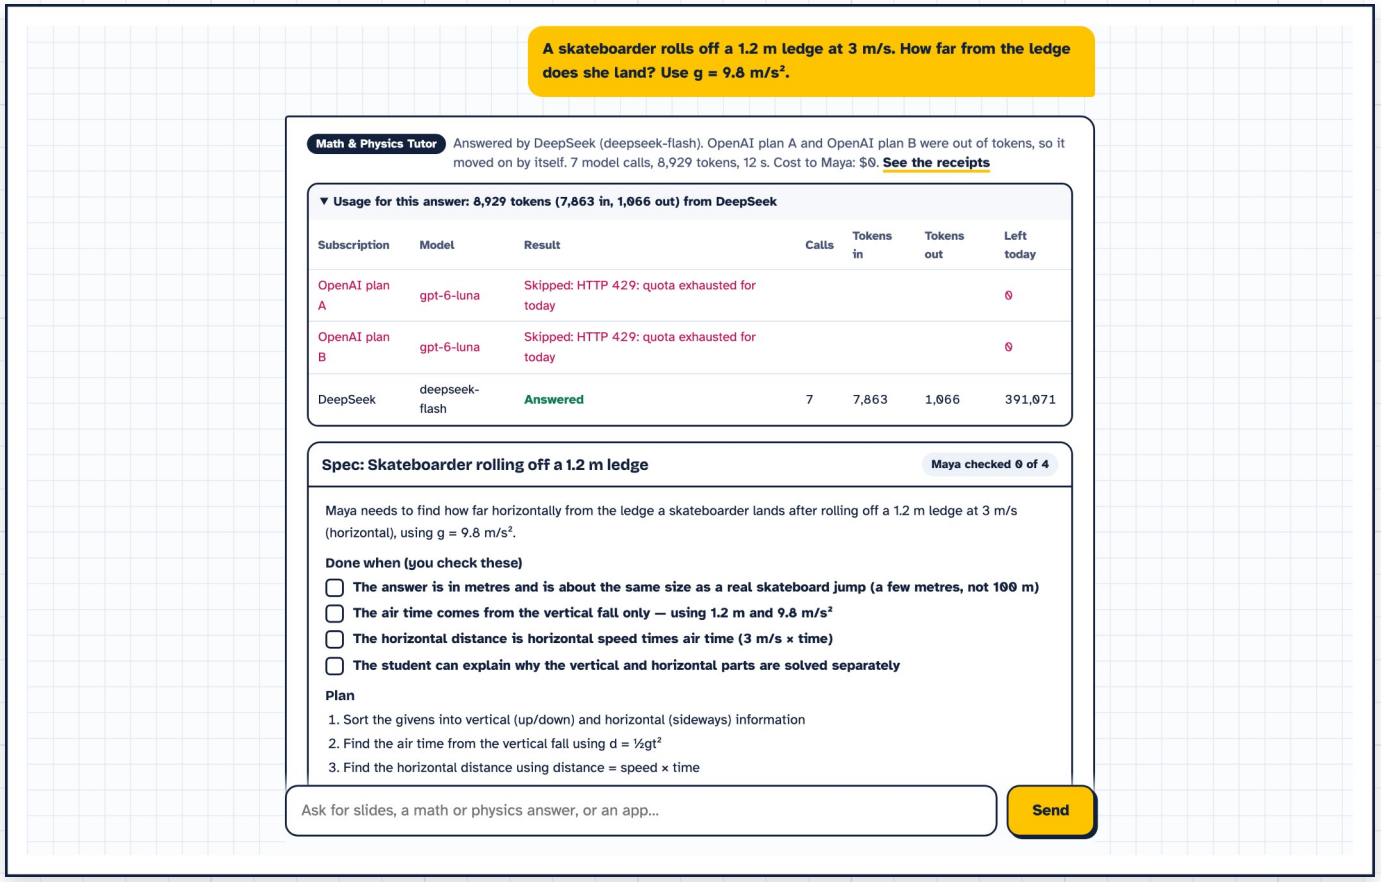

Pool what the school already has

1. **OpenAI plans on GPT-6 Luna**
   Each plan the school holds, in turn

2. **Gemini free tier**
   On the district account

3. **DeepSeek**
   A low-cost backup

4. **A school Mac on Codex**
   Billed to its ChatGPT plan

Tried in order. On a 429, a quota error or a spent daily budget, the next call goes to the next one. Students never see an error.

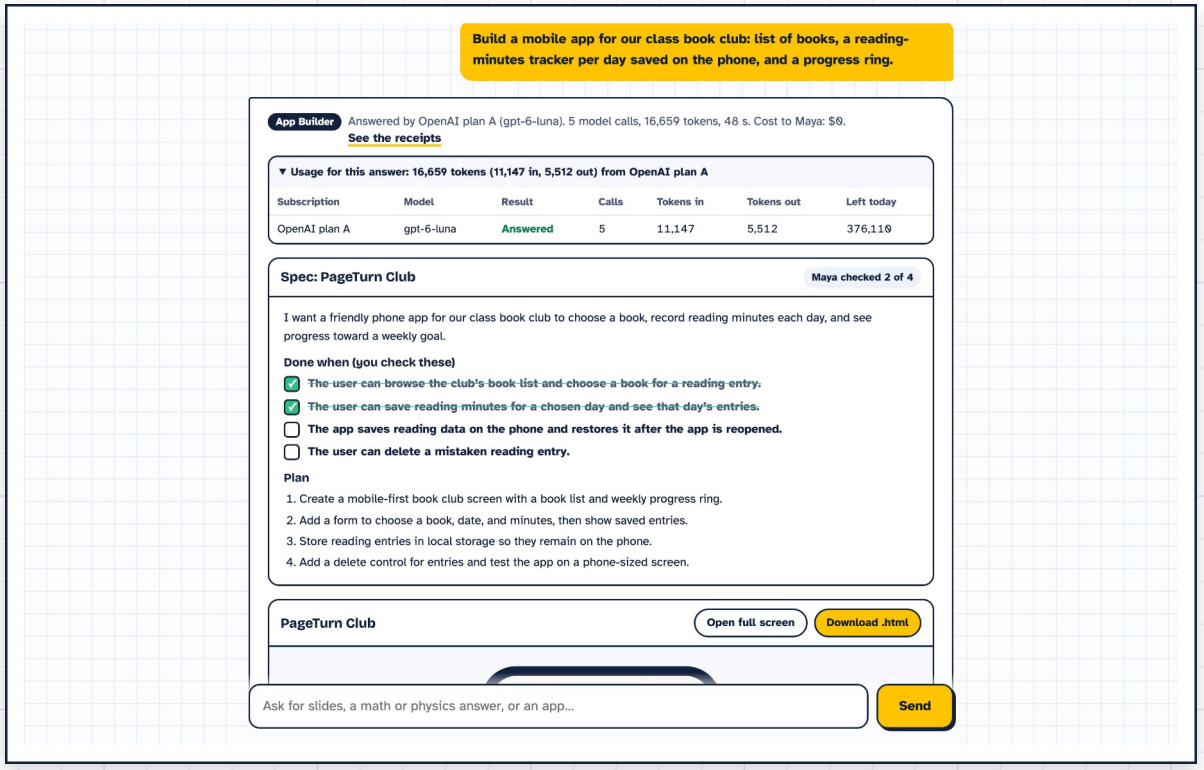

HOW STUDENTS WORK

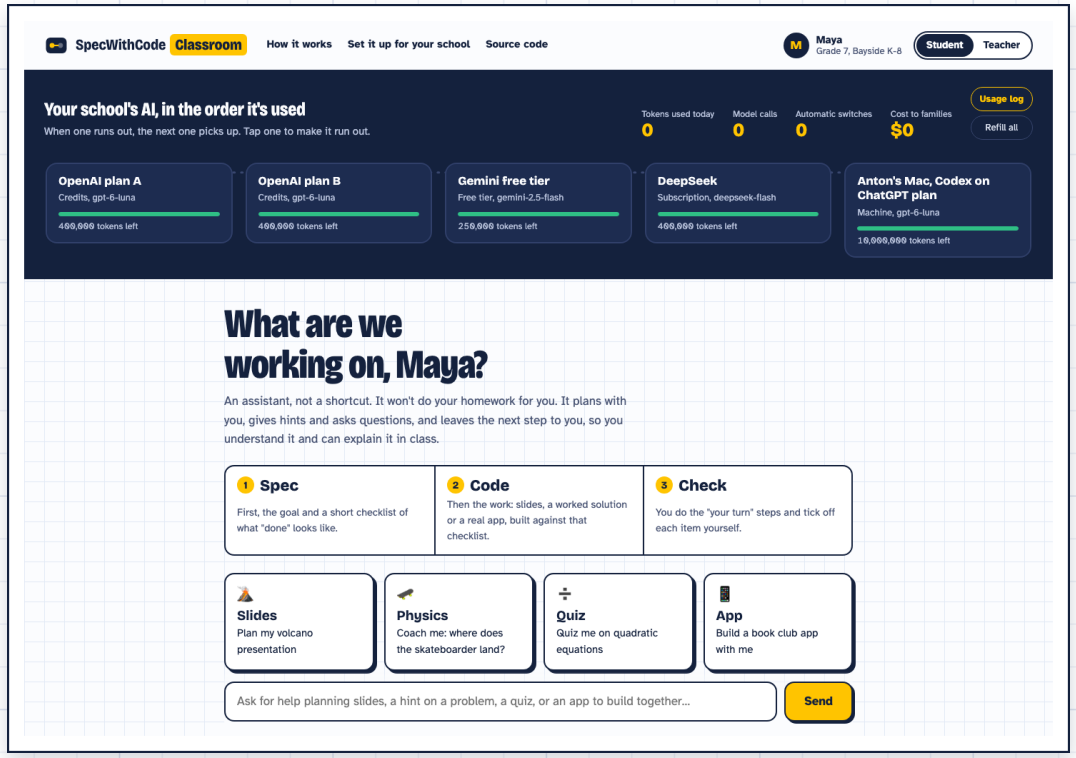

Spec, Code, Check: an assistant, not a shortcut

1 **Spec**
A "done when" checklist first

2 **Code**
The agent does the heavy lifting

3 **Check**
The student ticks it off and does the last step

Left: the spec an app starts from. Right: student mode, where hints and "your turn" steps replace ready answers.

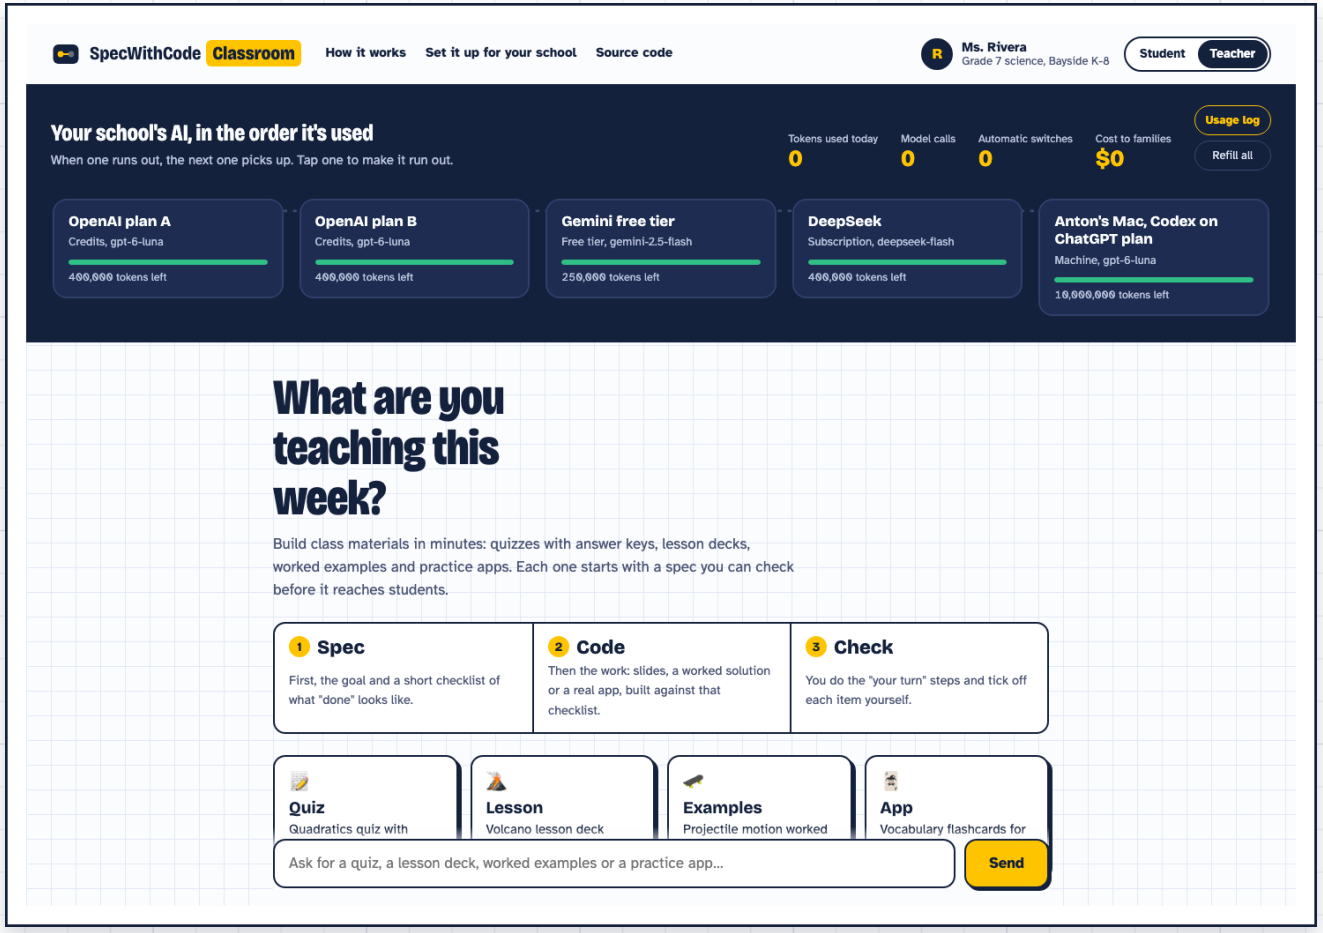

FOR TEACHERS

Teachers get their time back

1 **Quizzes with answer keys**
Each one starts from a spec you check

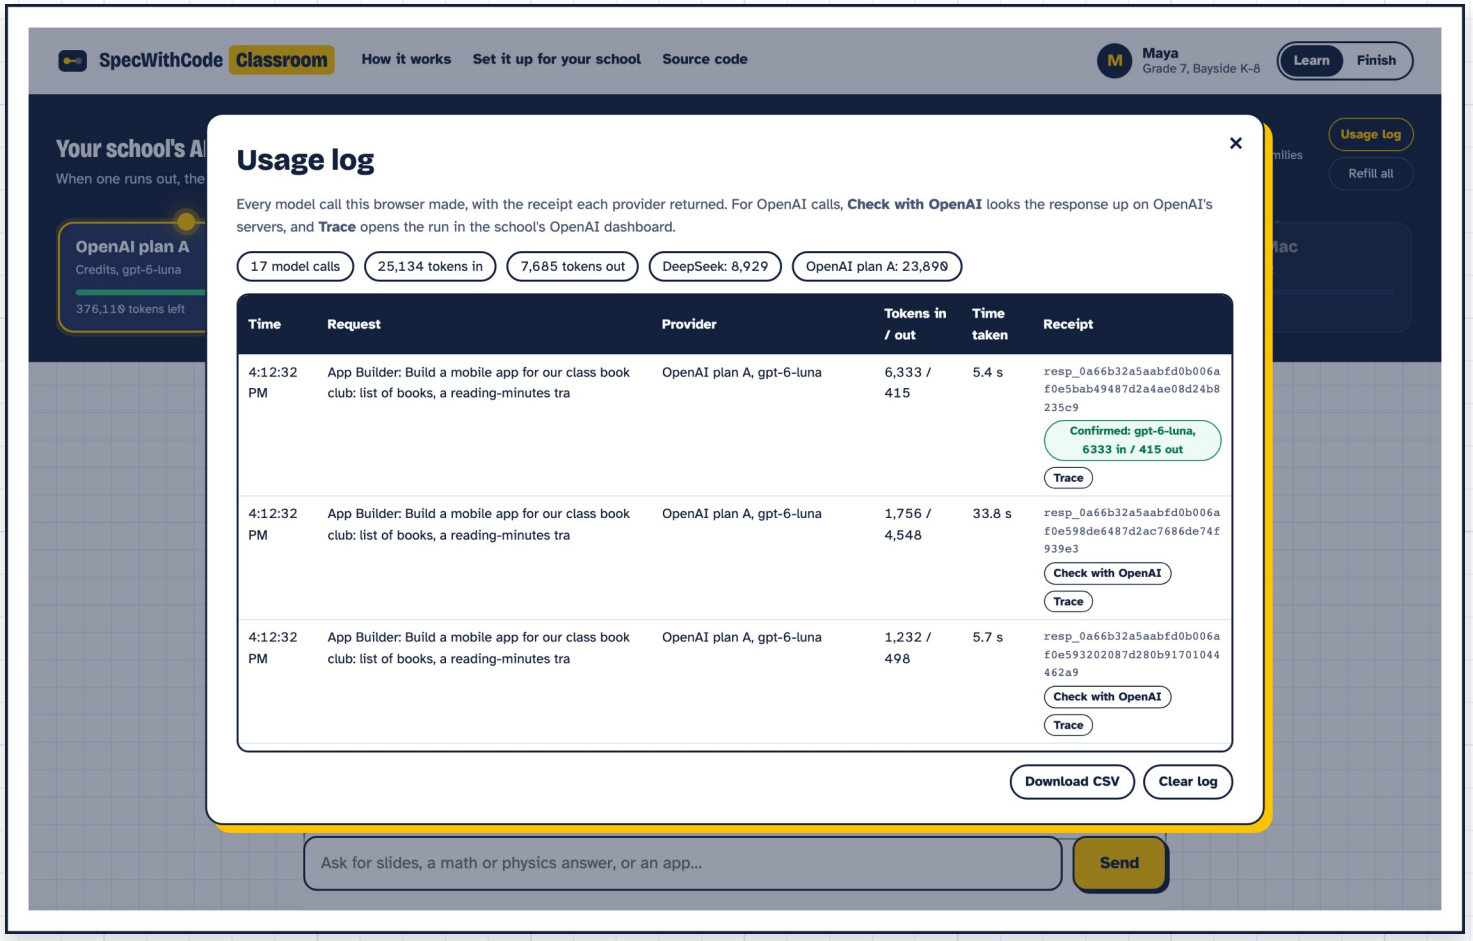

2 **Lesson decks**
Slides with speaker notes, downloadable .pptx

3 **Check student answers**
Feedback on what is right and what to fix

PROOF

Every answer comes with a receipt

1 **Per-call receipts**
Provider, tokens in and out, and the provider's response id

2 **Check with OpenAI**
One click looks the response up on OpenAI's servers

3 **Agents SDK traces**
Open the full trace of the run

UNDER THE HOOD

How it's built

1 OpenAI Agents SDK

Coach agent hands off to Slides Studio, a Math and Physics Tutor and an App Builder. K-12 input guardrail. Custom FailoverModel walks the ring.

2 OpenAI API

Responses API with gpt-6-luna on every OpenAI plan the school holds. Traces go to the school's OpenAI dashboard.

3 Codex

Wrote the offline test suite for the router and slide exporter, and joins the ring as a school machine.

4 FastAPI on Vercel

Plain HTML, CSS and JS front end. One deploy, no install for students.

TRY IT

Use it in class today

specwithcode-classroom.vercel.app

github.com/anton-abyzov/specwithcode-classroom

$0 to families. Built for South Florida K-12 schools.
